WHAT COUNTS. Credited hours are station standby and training shifts whose check-in was location-verified at the station. Those are the hours reported for ISO and LOSAP.

ATTENDANCE-DERIVED HOURS. A member marked present at a drill earns hours at the drill's recorded length. Those hours are RECORDED, never credited: nobody verified they were at the station, and the times shown are the drill's schedule rather than an observed arrival. Where a member did check in, their actual clocked duration is used instead and the estimate is not produced at all. Board meetings, off-site sessions and drills with no recorded length produce no hours.

WHAT IS EXCLUDED, and shown anyway. Unverified shifts are recorded and listed but never added to the credited figure. Auto-closed shifts are excluded even when the check-in was verified: the stop time was estimated by the system rather than observed, so the duration is not evidence until an officer confirms it. Off-site work, incident time, and shifts still open at the end of the period are not included at all.

The ISO figure overlaps concurrent shifts and clips them to the period, so it will not always equal the credited total. Capture method (manual or automatic check-in) is recorded against each shift but is not reproduced here.
